

Columbian Violence and Displacement Flows- Summary Statistics, 5/12/2020

I have appended the province and region information to the flows dataset, creating a new numerical variable that represents the province (“province_code”). This updated data file is saved as “/output/COL_muni_flows.csv” in this Dropbox folder.

I have also checked that the cumulative variables are correct.

1. Correlation Matrix of the five cumulative displacement measures, using observations from 2012.

Table 1: 2012 Only

	AS	CODHES	RUV	CEDE	JYP
AS	1.000	0.720	0.874	0.869	0.919
CODHES	0.720	1.000	0.636	0.668	0.712
RUV	0.874	0.636	1.000	0.840	0.884
CEDE	0.869	0.668	0.840	1.000	0.871
JYP	0.919	0.712	0.884	0.871	1.000

2. Year-by-year correlation matrices of five displacement flows

Table 2: 1996

3. Identify outliers in displacement flows measures

I define an observation as an outlier if at least one of the displacement flows is three standard deviations from the mean. I have collected these observations into a separate CSV folder, saved as “../figures/outliers.csv” in this Dropbox folder.

4. Pairwise scatter plots of displacement flows by year.

The figures are saved in the folder “../figures/pairwise_plots_year/” on Dropbox. Note that I have excluded outliers from these figures.

5. Identify instances where there is an increase in displacement when there is an increase in violence

I have collected the observations that meet this condition for each of the five displacement measures. These observations are reported in a separate CSV files called “../figures/X_instances.csv” where X is the name of one of the five displacement measures. For example, observations for the AS displacement flows are reported under “../figures/displaced_AS_instances.csv”

6. Distribution between number of years between an increase in violence and an increase in displacement

The figures are saved under the folder “../figures/dist_displaced” on Dropbox.

7. Figures of cumulative violence on cumulative displacements (per capita) at time periods with violence increments

I create one graph for each municipality and save under the folder “../figures/cum_viol_disp_bymuni/”. The name of each graph is the municipality code.

8. How many instances there are in which one of the displacement measures records a zero, while the other four record positive numbers?

```
## [1] 5558
```

9. How many instances there are in which two of the displacement measures records a zero, while the other three record positive numbers?

```
## [1] 1104
```

10. Figures of displacement flows by municipality

The figures are saved in the folder “../figures/disp_flow_bymuni/” on Dropbox. For municipalities that had $v_t > 0$ for some t (group 1), I saved their figures in the “v_t pos” sub folder. For municipalities that had $v_t = 0$ for all t (group 2), I saved their figures in the “v_t all zero” sub folder.

11. How many instances there are where $v_1 > 0$ and $d_t = 0$ for some of the measures?

```
## [1] 763
```
